Journal of Materials Processing Technology 148 (2004) 396–400

Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

Subject Index of Volume 148

AA6063
The effect of homogenization practice on the microstructure of AA6063 billets, 250
AA5013 aluminum alloy
Mechanical properties and microstructural evaluation of AA5013 aluminum alloy treated in the semi-solid state by SIMA process, 103
AISI D5 tool steel
Experimental study of wire electrical discharge machining of AISI D5 tool steel, 362
Al alloy
Rapid prototyping of 4043 Al-alloy parts by VP-GTAW, 93
ALE method
3D FEM simulation of stationary metal forming processes with applications to slitting and rolling, 328
Al-rich sludge
Production of Al-rich sludge-containing ceramic bodies by different shaping techniques, 139
Aluminum
Surface roughening and color changes of coated aluminum sheets during plastic straining, 68
Aluminum alloy
Investigation into hydrodynamic deep drawing assisted by radial pressure. Part I. Experimental observations of the forming process of aluminum alloy, 119
Dynamic and static softening behaviors of aluminum alloys during multistage hot deformation, 245
Artificial neural network
Neural network prediction of flow stress of Ti–15–3 alloy under hot compression, 235
Automatic design
Automatic design of fuzzy logic controller using a genetic algorithm—to predict power requirement and surface finish in grinding, 288
Automatic set-up planning
Machine capability and fixturing constraints-imposed automatic machining set-ups generation, 83

Boronizing
An evaluation of some properties of borides deposited on boronized ductile iron, 1
Brass
Failure modes in field-tested brass die casting dies, 108

Cast dendritic ZA27 alloy
The microstructural and constitutional evolution of cast dendritic ZA27 alloy during partial remelting, 8
Casting
Filling system for investment cast Ni-base turbine blades, 310
Ceramic and PCBN tools
Some effects of cutting edge preparation and geometric modifications when turning INCONEL 718™ at high cutting speeds, 147
Ceramic packaging
Effect of lamination conditions on sintered properties of glass-ceramic substrates for microelectronic packaging, 165
Circular-arc teeth
Computerized tooth profile generation and analysis of characteristics of elliptical gears with circular-arc teeth, 226
CNC
CNC EDM of linear and circular contours using plate tools, 196
Coating
Surface roughening and color changes of coated aluminum sheets during plastic straining, 68
Coatings
Improvement of surface finishing and corrosion resistance of prototypes produced by direct metal laser sintering, 301
Colorimetry
Surface roughening and color changes of coated aluminum sheets during plastic straining, 68
Composite laminates
Workpiece damping and its effect on delamination damage in drilling thin composite laminates, 186
Computer-aided process planning
Machine capability and fixturing constraints-imposed automatic machining set-ups generation, 83
Conceptual fixture design
Machine capability and fixturing constraints-imposed automatic machining set-ups generation, 83
Cooling system geometry
Changing the geometry of water spray on milling work roll and its effect on work roll temperature, 35
Corrosion protection
Improvement of surface finishing and corrosion resistance of prototypes produced by direct metal laser sintering, 301
Crystal lattice
A novel nano-Moiré method with scanning tunneling microscope (STM), 77
Cutting fluids
Performance evaluation of vegetable-based oils in drilling austenitic stainless steel, 171
Cutting forces
Performance evaluation of vegetable-based oils in drilling austenitic stainless steel, 171
Strains and cutting forces involved in the solid wood rotating cutting process, 220
An improved dynamic cutting force model for end-milling process, 317

Damage free machining
Workpiece damping and its effect on delamination damage in drilling thin composite laminates, 186
Damping
Workpiece damping and its effect on delamination damage in drilling thin composite laminates, 186

Elsevier B.V.
doi:10.1016/S0924-0136(04)00440-6

Data acquisition
Effect of cooling water flow rates on local temperatures and heat transfer of casting dies, 57
Defects
Filling system for investment cast Ni-base turbine blades, 310
Defferential theory
Numerical study of photolithography system: electromagnetic differential method, 50
Deformation behaviour
Deformation behaviours of laser curve bending of sheet metals, 30
Delamination
Workpiece damping and its effect on delamination damage in drilling thin composite laminates, 186
Density
Strains and cutting forces involved in the solid wood rotating cutting process, 220
Die casting
Effect of cooling water flow rates on local temperatures and heat transfer of casting dies, 57
Failure modes in field-tested brass die casting dies, 108
Die design
Processing of eutectic Zn–5% Al alloy by equal-channel angular pressing, 279
Dielectric constant
Effect of lamination conditions on sintered properties of glass-ceramic substrates for microelectronic packaging, 165
Direct metal laser sintering
Improvement of surface finishing and corrosion resistance of prototypes produced by direct metal laser sintering, 301
Directional solidification
Electromagnetic shaping and solidification control of Ni-base superalloys under vacuum, 25
Dispatching rules
Effect of dynamic and static dispatching strategies on dynamically planned and unplanned FMS, 132
Distributed computing simulation
Inverse design of glass forming process simulation using an optimization technique and distributed computing, 342
Drilling
Performance evaluation of vegetable-based oils in drilling austenitic stainless steel, 171
Workpiece damping and its effect on delamination damage in drilling thin composite laminates, 186
Ductile irons
An evaluation of some properties of borides deposited on boronized ductile iron, 1
Dynamic softening
Dynamic and static softening behaviors of aluminum alloys during multistage hot deformation, 245

Edge preparation
Some effects of cutting edge preparation and geometric modifications when turning INCONEL 718™ at high cutting speeds, 147
EDM
CNC EDM of linear and circular contours using plate tools, 196
Electro discharge machining
Effect of EDM process parameters on 3D surface topography, 155
Electroless nickel
Improvement of surface finishing and corrosion resistance of prototypes produced by direct metal laser sintering, 301
Electromagnetic shaping
Electromagnetic shaping and solidification control of Ni-base superalloys under vacuum, 25
Elliptical gear
Computerized tooth profile generation and analysis of characteristics of elliptical gears with circular-arc teeth, 226
End mill
An improved dynamic cutting force model for end-milling process, 317
Equal-channel angular pressing
Processing of eutectic Zn–5% Al alloy by equal-channel angular pressing, 279
Ester oils
Performance evaluation of vegetable-based oils in drilling austenitic stainless steel, 171
Experimental analysis
Investigation into hydrodynamic deep drawing assisted by radial pressure. Part I. Experimental observations of the forming process of aluminum alloy, 119
Extrusion
The effect of homogenization practice on the microstructure of AA6063 billets, 250

Failure mechanisms
Failure modes in field-tested brass die casting dies, 108
Fatigue
A study of post-form static and fatigue properties of superplastic 7475-SPF and 5083-SPF aluminium alloys, 204
FEM simulation
Deformation behaviours of laser curve bending of sheet metals, 30
Field test
Failure modes in field-tested brass die casting dies, 108
Finite element analysis
Finite element analysis of spring-back of V-bending sheet metal forming processes, 15
Finite element method
A new shape change quantification method for estimation of power in shape rolling, 353
An investigation into the forming limits of sintered porous materials under different operational conditions, 382
Flexible forming
Computer aided modelling of flexible forming process, 376
Flexible manufacturing systems
Effect of dynamic and static dispatching strategies on dynamically planned and unplanned FMS, 132
FMS scheduling
Effect of dynamic and static dispatching strategies on dynamically planned and unplanned FMS, 132
Forming limit diagrams
Unified failure analysis for tubular hydroforming, 269
Forming limits
An investigation into the forming limits of sintered porous materials under different operational conditions, 382
Fracture toughness
An evaluation of some properties of borides deposited on boronized ductile iron, 1
FRPs
Investigation on thrust in vibration drilling of fiber-reinforced plastics, 239
Fuzzy logic controller
Automatic design of fuzzy logic controller using a genetic algorithm—to predict power requirement and surface finish in grinding, 288

Gas tungsten arc welding
Rapid prototyping of 4043 Al-alloy parts by VP-GTAW, 93
Gauge
Neutron diffraction residual stress mapping in same gauge and differential gauge tailor-welded blanks, 177
Genetic algorithm
Automatic design of fuzzy logic controller using a genetic algorithm—to predict power requirement and surface finish in grinding, 288

Glass forming process
Inverse design of glass forming process simulation using an optimization technique and distributed computing, 342
Grinding
Automatic design of fuzzy logic controller using a genetic algorithm—to predict power requirement and surface finish in grinding, 288

Hard turning
Tool nose radius effects on finish hard turning, 259
Hardness
An evaluation of some properties of borides deposited on boronized ductile iron, 1
Heat transfer
Effect of cooling water flow rates on local temperatures and heat transfer of casting dies, 57
Heat transfer coefficients
Inverse design of glass forming process simulation using an optimization technique and distributed computing, 342
High temperature flow characteristics
Neural network prediction of flow stress of Ti–15–3 alloy under hot compression, 235
High-speed machining
Some effects of cutting edge preparation and geometric modifications when turning INCONEL 718^{TM} at high cutting speeds, 147
Homogenization
The effect of homogenization practice on the microstructure of AA6063 billets, 250
Hot work tool steel
Failure modes in field-tested brass die casting dies, 108
Hydrodynamic deep drawing assisted by radial pressure
Investigation into hydrodynamic deep drawing assisted by radial pressure. Part I. Experimental observations of the forming process of aluminum alloy, 119
Hydroforming
Investigation into hydrodynamic deep drawing assisted by radial pressure. Part I. Experimental observations of the forming process of aluminum alloy, 119
Unified failure analysis for tubular hydroforming, 269

Instantaneous shear plane
An improved dynamic cutting force model for end-milling process, 317
Internal water cooling
Effect of cooling water flow rates on local temperatures and heat transfer of casting dies, 57
Inverse problem
Inverse design of glass forming process simulation using an optimization technique and distributed computing, 342
Investment
Filling system for investment cast Ni-base turbine blades, 310

Lamellar gratings
Numerical study of photolithography system: electromagnetic differential method, 50
Lamination
Effect of lamination conditions on sintered properties of glass-ceramic substrates for microelectronic packaging, 165
Laser curve bending
Deformation behaviours of laser curve bending of sheet metals, 30
Layer deposition
Rapid prototyping of 4043 Al-alloy parts by VP-GTAW, 93

Material properties
The determination of ploughing force and its influence on material properties in metal cutting, 368
Mathematical model
Computerized tooth profile generation and analysis of characteristics of elliptical gears with circular-arc teeth, 226
Mechanical characteristics
Strains and cutting forces involved in the solid wood rotating cutting process, 220
Metal cutting
The determination of ploughing force and its influence on material properties in metal cutting, 368
Metal forming
Finite element analysis of spring-back of V-bending sheet metal forming processes, 15
Microstructural evolution
The microstructural and constitutional evolution of cast dendritic ZA27 alloy during partial remelting, 8
Microstructure
Rapid prototyping of 4043 Al-alloy parts by VP-GTAW, 93
The effect of homogenization practice on the microstructure of AA6063 billets, 250
Mooney–Rivlin
Computer aided modelling of flexible forming process, 376
Mullite–alumina refractories
Production of Al-rich sludge-containing ceramic bodies by different shaping techniques, 139
Multistage hot deformation
Dynamic and static softening behaviors of aluminum alloys during multistage hot deformation, 245

Nano-metrology
A novel nano-Moiré method with scanning tunneling microscope (STM), 77
Nano-Moiré
A novel nano-Moiré method with scanning tunneling microscope (STM), 77
Necking criterion
Unified failure analysis for tubular hydroforming, 269
Neural network
A new shape change quantification method for estimation of power in shape rolling, 353
Neutron diffraction
Neutron diffraction residual stress mapping in same gauge and differential gauge tailor-welded blanks, 177
Ni-base
Filling system for investment cast Ni-base turbine blades, 310
Nickel-based alloys
Some effects of cutting edge preparation and geometric modifications when turning INCONEL 718^{TM} at high cutting speeds, 147
Nonlinear analysis
Computer aided modelling of flexible forming process, 376

Oblique cutting
An improved dynamic cutting force model for end-milling process, 317
Optimization technique
Inverse design of glass forming process simulation using an optimization technique and distributed computing, 342

Partial remelting
The microstructural and constitutional evolution of cast dendritic ZA27 alloy during partial remelting, 8
Periodic masks
Numerical study of photolithography system: electromagnetic differential method, 50
Periodic state
Inverse design of glass forming process simulation using an optimization technique and distributed computing, 342

Phase transformation
The microstructural and constitutional evolution of cast dendritic ZA27 alloy during partial remelting, 8
Photolithography
Numerical study of photolithography system: electromagnetic differential method, 50
Plastic-buckling
Unified failure analysis for tubular hydroforming, 269
Plasticity
An investigation into the forming limits of sintered porous materials under different operational conditions, 382
Ploughing force
The determination of ploughing force and its influence on material properties in metal cutting, 368
Pointed teeth
Computerized tooth profile generation and analysis of characteristics of elliptical gears with circular-arc teeth, 226
Porous materials
An investigation into the forming limits of sintered porous materials under different operational conditions, 382
Post-form properties
A study of post-form static and fatigue properties of superplastic 7475-SPF and 5083-SPF aluminium alloys, 204
Powder forging
An investigation into the forming limits of sintered porous materials under different operational conditions, 382
Power requirement
Automatic design of fuzzy logic controller using a genetic algorithm—to predict power requirement and surface finish in grinding, 288
Prototyping
Improvement of surface finishing and corrosion resistance of prototypes produced by direct metal laser sintering, 301

Rapid prototyping
Rapid prototyping of 4043 Al-alloy parts by VP-GTAW, 93
Recycling
Production of Al-rich sludge-containing ceramic bodies by different shaping techniques, 139
Residual stress
Some effects of cutting edge preparation and geometric modifications when turning INCONEL 718™ at high cutting speeds, 147
R-matrix algorithm
Numerical study of photolithography system: electromagnetic differential method, 50
Roughness
Surface roughening and color changes of coated aluminum sheets during plastic straining, 68

Scanning tunneling microscope
A novel nano-Moiré method with scanning tunneling microscope (STM), 77
Semi-solid forming
The microstructural and constitutional evolution of cast dendritic ZA27 alloy during partial remelting, 8
Semi-solid processing
Mechanical properties and microstructural evaluation of AA5013 aluminum alloy treated in the semi-solid state by SIMA process, 103
Shape rolling
3D FEM simulation of stationary metal forming processes with applications to slitting and rolling, 328
A new shape change quantification method for estimation of power in shape rolling, 353
Shaping techniques
Production of Al-rich sludge-containing ceramic bodies by different shaping techniques, 139
Sheet forming
Surface roughening and color changes of coated aluminum sheets during plastic straining, 68
Sheet metal
Computer aided modelling of flexible forming process, 376
Sheet metals
Deformation behaviours of laser curve bending of sheet metals, 30
Unified failure analysis for tubular hydroforming, 269
SIMA process
Mechanical properties and microstructural evaluation of AA5013 aluminum alloy treated in the semi-solid state by SIMA process, 103
Sintering shrinkage
Effect of lamination conditions on sintered properties of glass-ceramic substrates for microelectronic packaging, 165
Sitting
3D FEM simulation of stationary metal forming processes with applications to slitting and rolling, 328
5083-SPF
A study of post-form static and fatigue properties of superplastic 7475-SPF and 5083-SPF aluminium alloys, 204
7475-SPF
A study of post-form static and fatigue properties of superplastic 7475-SPF and 5083-SPF aluminium alloys, 204
Static softening
Dynamic and static softening behaviors of aluminum alloys during multistage hot deformation, 245
Superalloys
Electromagnetic shaping and solidification control of Ni-base superalloys under vacuum, 25
Superplastic forming
A study of post-form static and fatigue properties of superplastic 7475-SPF and 5083-SPF aluminium alloys, 204
Superplasticity
A study of post-form static and fatigue properties of superplastic 7475-SPF and 5083-SPF aluminium alloys, 204
Surface characterization
Surface roughening and color changes of coated aluminum sheets during plastic straining, 68
Surface finish
Tool nose radius effects on finish hard turning, 259
Automatic design of fuzzy logic controller using a genetic algorithm—to predict power requirement and surface finish in grinding, 288
Surface integrity
Experimental study of wire electrical discharge machining of AISI D5 tool steel, 362
Surface mechanics
Surface roughening and color changes of coated aluminum sheets during plastic straining, 68
Surface roughness
Some effects of cutting edge preparation and geometric modifications when turning INCONEL 718™ at high cutting speeds, 147

Taguchi orthogonal array
Effect of EDM process parameters on 3D surface topography, 155
Testing
Performance evaluation of vegetable-based oils in drilling austenitic stainless steel, 171
Thermal crown
Changing the geometry of water spray on milling work roll and its effect on work roll temperature, 35

Thermal expansion
Effect of lamination conditions on sintered properties of glass-ceramic substrates for microelectronic packaging, 165
Thermal fatigue
Failure modes in field-tested brass die casting dies, 108
Thrust
Investigation on thrust in vibration drilling of fiber-reinforced plastics, 239
Ti–15–3 alloy
Neural network prediction of flow stress of Ti–15–3 alloy under hot compression, 235
Tool nose radius
Tool nose radius effects on finish hard turning, 259
Tool wear
Tool nose radius effects on finish hard turning, 259
Tooling
CNC EDM of linear and circular contours using plate tools, 196
Tooth undercutting
Computerized tooth profile generation and analysis of characteristics of elliptical gears with circular-arc teeth, 226
Turbine blade
Electromagnetic shaping and solidification control of Ni-base superalloys under vacuum, 25
Filling system for investment cast Ni-base turbine blades, 310
TWB
Neutron diffraction residual stress mapping in same gauge and differential gauge tailor-welded blanks, 177

V-bending
Finite element analysis of spring-back of V-bending sheet metal forming processes, 15
Vegetable oils
Performance evaluation of vegetable-based oils in drilling austenitic stainless steel, 171
Vibration drilling
Investigation on thrust in vibration drilling of fiber-reinforced plastics, 239

Water flow
Effect of cooling water flow rates on local temperatures and heat transfer of casting dies, 57
Wear mechanisms
Some effects of cutting edge preparation and geometric modifications when turning INCONEL 718™ at high cutting speeds, 147
WEDM process
Experimental study of wire electrical discharge machining of AISI D5 tool steel, 362
White layer
Tool nose radius effects on finish hard turning, 259
Wood machining
Strains and cutting forces involved in the solid wood rotating cutting process, 220
Work roll
Changing the geometry of water spray on milling work roll and its effect on work roll temperature, 35
Workability
An investigation into the forming limits of sintered porous materials under different operational conditions, 382
Wrinkling
Unified failure analysis for tubular hydroforming, 269

Zn–Al alloys
Processing of eutectic Zn–5% Al alloy by equal-channel angular pressing, 279
